WINDOW SEAL

XYZ COMPANY

- Canadian Company _____
- Manufacturing for over 31 years _____
- 1,500,000 windows placed _____
- Extruders of Vinyl Profile _____
- Test Results _____

MANUFACTURING PROCESS

- Saw Automated _____
- Welder Automated _____
- Cleaner Shadow Grove Automated _____
- Glass Cutting Automated _____
- Super Spacer Automated _____
- Sealed Units Automated _____

OUR MANUFACTURING TECHNOLOGY

The importance to making a quality window starts with control and consistency. Our automated saws cut vinyl profiles to exact measurement; automated welders weld the frame and the operating sash at the same time. This ensures the best possible seal, (having a great seal is our vision, and a reflection in our company name **WINDOW SEAL**). All corners are finished by automated cleaning systems that give a unique shadow grove to a corner; more importantly, making sure your welded corner frames are not susceptible to cracks in the future. All glass is cut, using automation giving precision cuts to your window pane. This glass is cleaned through our automated glass washer ensuring each unit has not been marked. We then seal each unit with our automated super spacer applicator.

PROGRESSIVE PROFILES, RAW VINYL

- Extruders of vinyl _____
- Co-extrusion colors (no paint=no scratch) _____
- Stainless Steel Dies _____
- Automated Calibrator _____
- Powder compound _____
- 11 years actual experience _____
- 6 years prior research _____

Our commitment is not to costly marketing; in fact we have put millions of dollars into acquiring the best technology. This is how **Progressive Profiles** came to be! There are only a handful of extruders out there, with the experience we have.
